

MEDIA KIT FACT SHEET

TLX Technologies is an innovative, technology-centric producer of custom electromagnetic products.

TLX Technologies uses proportional, high-speed, high temperature, and latching solenoid technologies to custom design and manufacture solenoids, actuators, and valves.

We work with customers to develop new, innovative products that solve problems in electromagnetic applications that can't be solved by standard, off-the-shelf products.

TLX Technologies was founded in 1996 to bring unique, high-speed digital valves to market for controlling the inflation of a vehicle air bag. Over the next 20+ years, we've expanded to serve multiple other industries beyond the automotive market, including the off-highway, fire protection, and industrial markets.

TLX Technologies was founded in 1996. Two of the four co-founders still help lead the company today. Neil Karolek now serves as company president and Derek Dahlgren as vice president.

Our company headquarters and design center are located in the United States, but we offer localized production in both the US and China.
